

CASE: NEW BUILDING

The changes associated with re-envisioning the use of space in the Banks Street building present the right time to construct a new building to meet the current and future needs of the school. The new building will ensure that school business and classrooms no longer physically overlap, creating a safer and more focused environment for teachers and students.

The school's business affairs which welcome the most visitors to campus, which include the bookstore, admissions, advancement, maintenance, student check-out, and the president's office, among others, will exist in a building physically separated from space used for academic and formational activities. The re-envisioned space will include a reception area to appropriately welcome and screen visitors to campus. The building will serve as the formal main entrance to campus.

The façade of the new building, which faces Will Clark Field along Banks Street, will be consistent with the architectural elements of the wing constructed in 1953 on Palmyra Street.

“Knowing that parents are entrusting us with the care of their sons, the safety and security of our students should always remain a top priority.”

—Fr. Christopher S. Fronk, S.J., president

22,000
SQUARE FEET

More than 22,000 sq. ft. will be added to Jesuit's campus when the new administrative building is constructed.

TIMELINE OF NEW CONSTRUCTION PROJECTS

- 1926** New campus on Carrollton & Banks
- 1953** Chapel of the North American Martyrs, auditorium, cafeteria, band room, library
- 1957** Jesuit Recreation Center (gymnasium)
- 1974** Resource Center (updated library)
- 1986** Louis J. Roussel Physical Education Building
- 2002** Traditions Courtyard, Student Commons, 3rd floor science labs
- 2012** John Ryan Stadium
